

Atlantic Adaption Theory; How to speed up evolution

4 0 1

Chapter 1 by Torin

Evolution is a combination of 2 processes, variation, and natural selection. An increase in either of these will result in an increase in the overall rate of evolution.

When we are babies we have gills but we lose them. If we could program our DNA not to. That would be how we could evade the "speed up evolution" Problem! But how can you stop a human from de-evolving? That is a problem no-one can answer. Let me know what you think, post for next chapter!
